Delivering E-Resources with LibX

- LibX is a localized Firefox extension that integrates access to electronic resources into the browser
- Motivation why do we need it?
- Background why did we build it?
- Demonstration what does it do?
- Editions how to get one for your library?

The Age of Google

- Study by Fast & Campbell 2004
 - I still like Google: university student perceptions of searching OPACs and the web
- Tampa Tribune article July 11, 2005
 - Professors frustrated with students relying solely on Google for research
 - Students respond that using the library is "work"

What Users May Not Know About Google

- Google does not vet sources
- Google's page ranking algorithm does not reflect relevance
- Google lacks metadata
- Google does not provide access to all possible sources (e.g., print holdings)
- Google does not know about local resources

What Users Like About Google

- Google is easy to use and convenient
 - Handles queries robustly
- Google is a one stop information resource
 - Web, Print, News, Scholar
- Google is fast and available 24/7
 - Search is integrated in most browsers

Our Challenge

- Can librarians provide patrons with resources that are
 - Relevant
 - Authoritative
 - Complete
 - Accessible
- while providing the ease of use, integration, and availability of modern search engines?

LibX History

- Idea developed in summer of 2005
- Researched existing library toolbars & extensions, scripts, bookmarklets,...
- Found a number of toolbars
 - FASTJack, HALbar, etc.
- Web localization services
 - Library Lookup project (Bookmarklets, Greasemonkey scripts)
 - WAG The Dog project

However...

LibX History (cont'd)

- Existing toolbars were <u>not</u> adaptable (or adoptable!) for use by other libraries
 - Or it wasn't easy to do so
- Existing toolbars were <u>limited</u> in functionality
- We wanted an easily adaptable infrastructure on which to deliver a wide variety of services

LibX

- Provides shortcut to library resources
- Uses Firefox browser extension technology
 - Integrated into the browser's user interface
 - Installed on the client-side

What LibX Provides

- Direct Access to OPAC(s)
 - Integrated toolbar
 - Smart context menu
- Direct access to OpenURL resolver to find appropriate copy
 - Directly via toolbar or indirectly through Google Scholar
- Localization
 - Research companion that "hints" at library resources
 - Support for COinS

OPAC Access

- Toolbar User Interface
 - Supports single & multi-term searches
 - Not intended to replace "advanced search page" captures common search pattern
 - User can set display preferences
- Right-click context menu
 - Adapts to selections
- Support of different OPACs
 - Millenium, Dynix/Horizon, Voyager, Aleph
 - Configurable to support multiple OPACs simultaneously

Demonstration 1

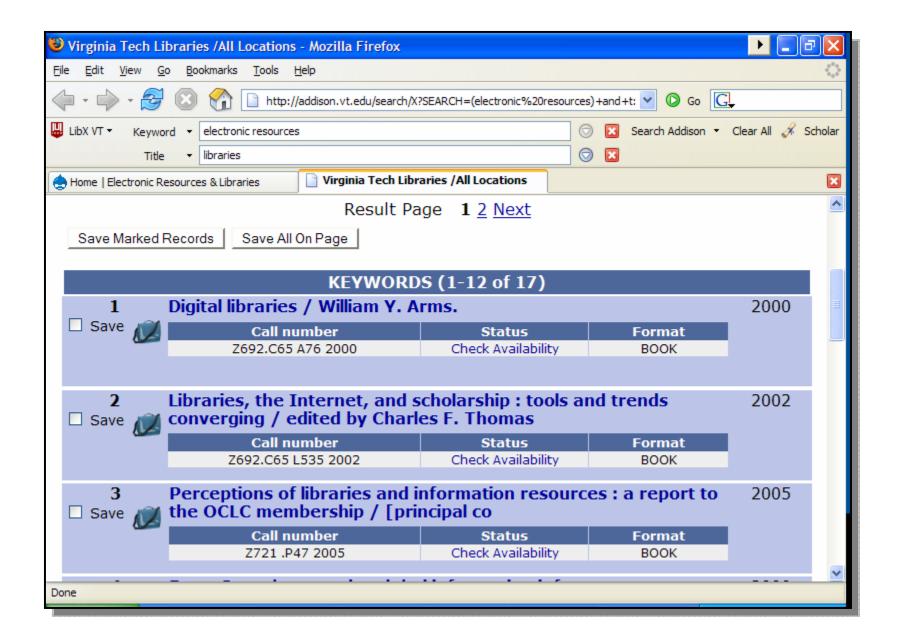

Toolbar, Context Menus

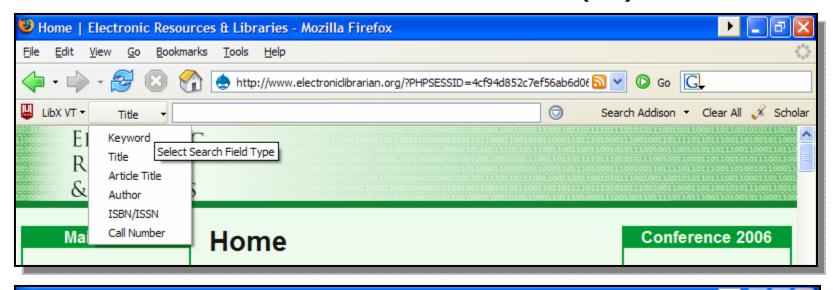

OPAC Toolbar

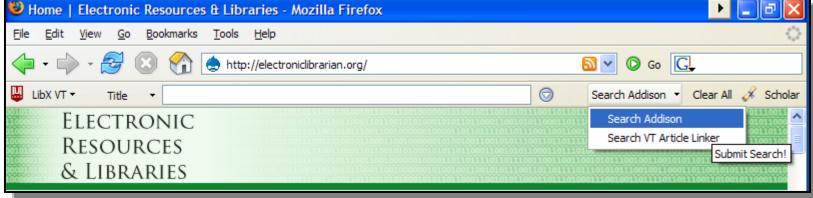

- Expands automatically for multi-term searches
- Offers commonly used search types:
 - Keyword, author, title, isbn, call number

OPAC Toolbar (2)

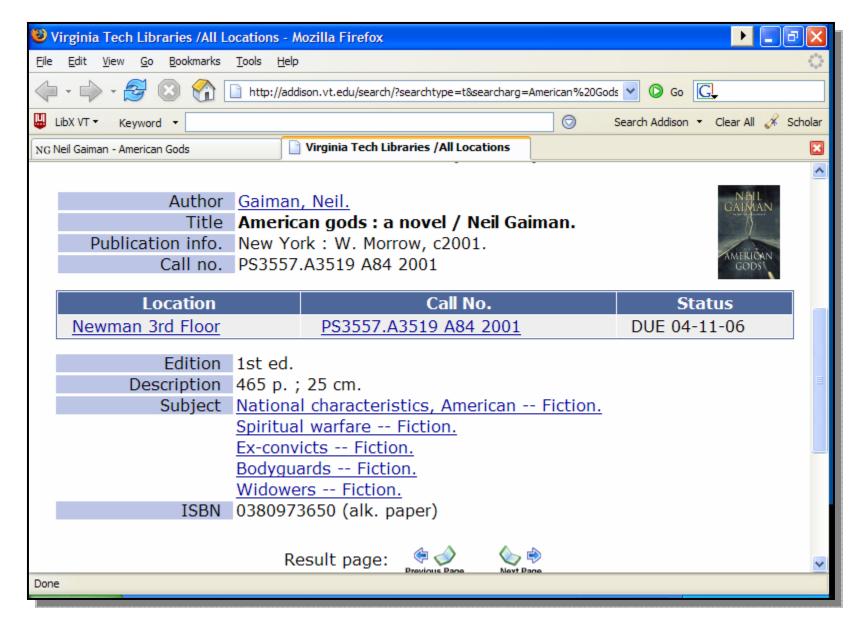

Context Menu

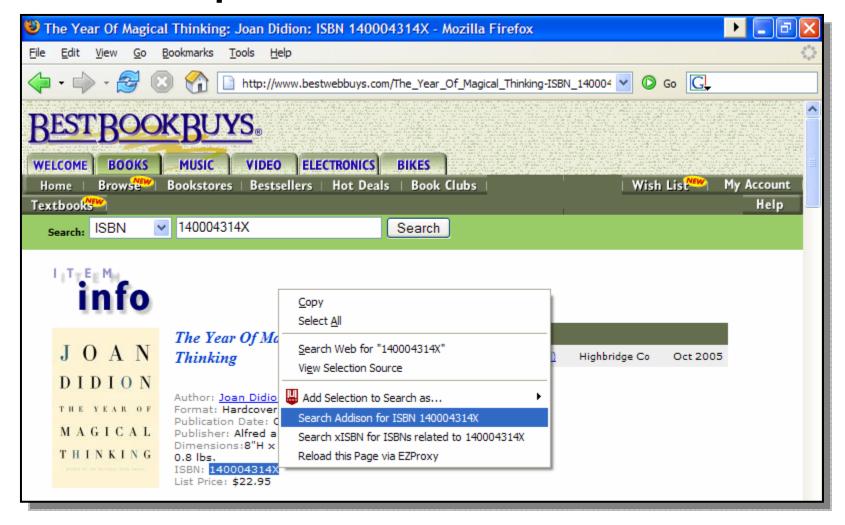

16

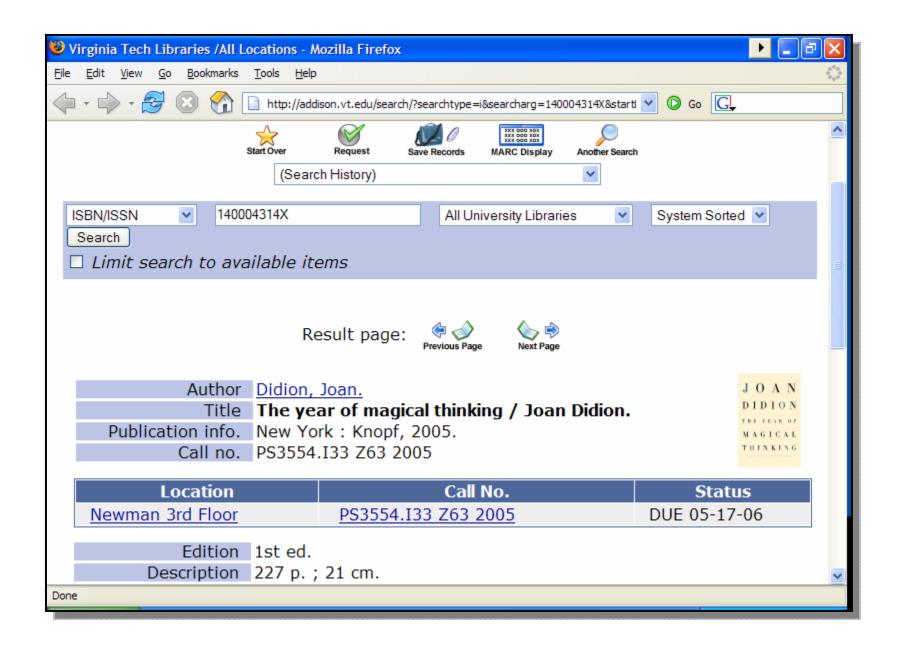

Nested Context Menu

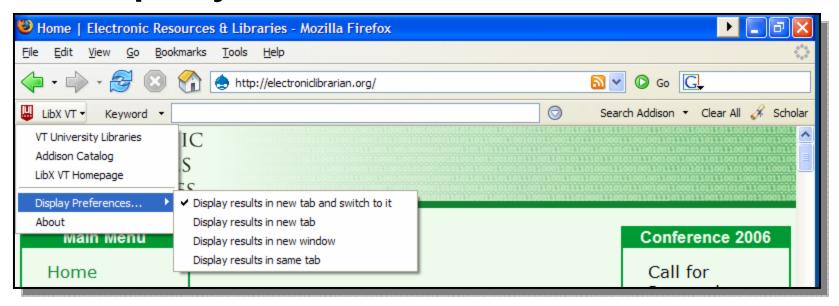

Adaptive Context Menu

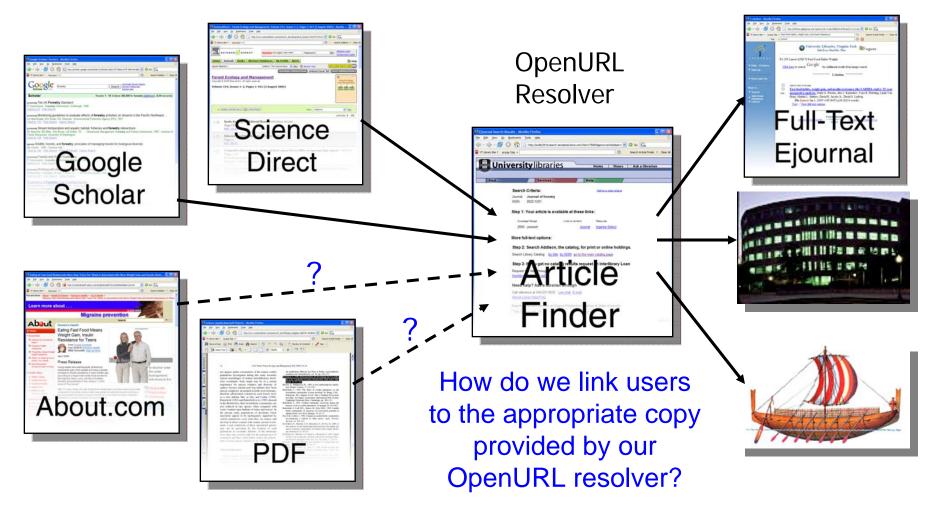

Display Preferences & Links

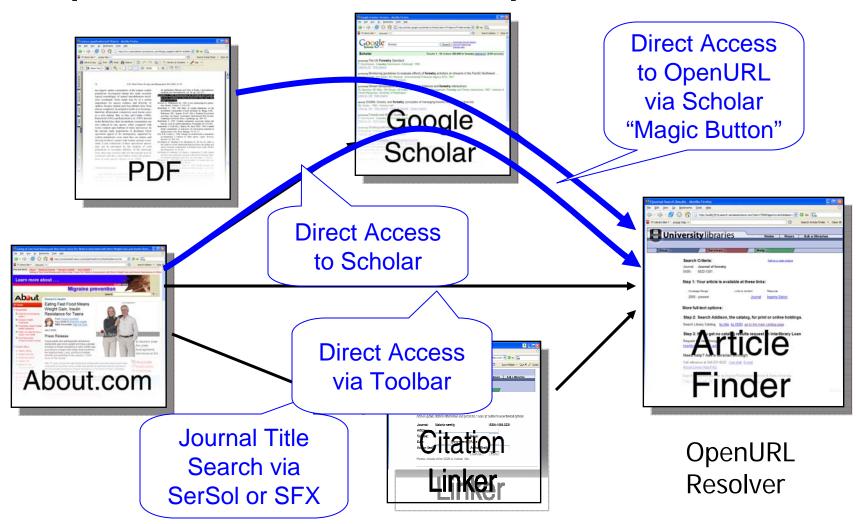

- Users can set preferences on how results should be displayed
- Libraries can configure links that are being displayed to users

OpenURL & Appropriate Copy

OpenURL Access Options in LibX

Demonstration 2

OpenURL Access & The "Magic Button"

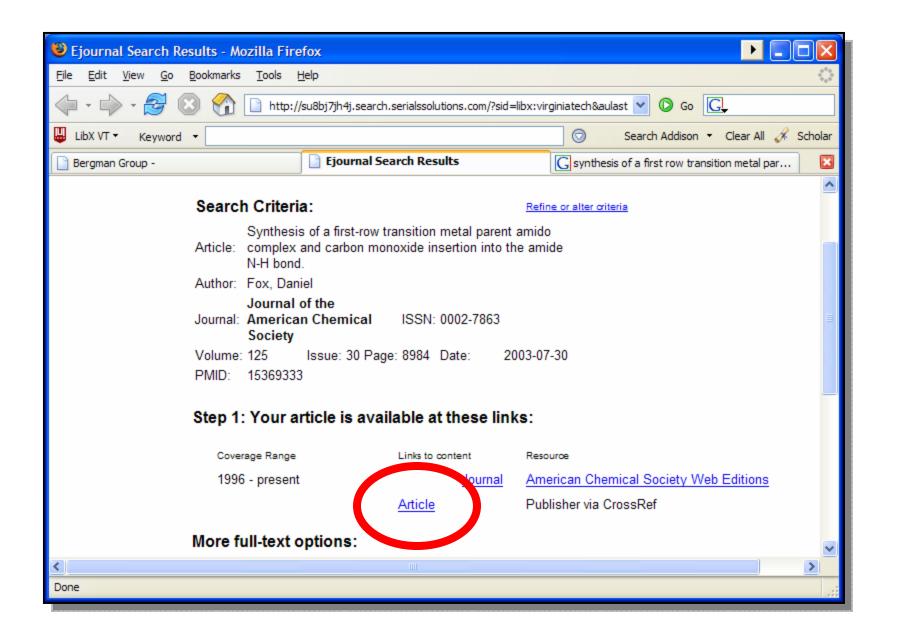

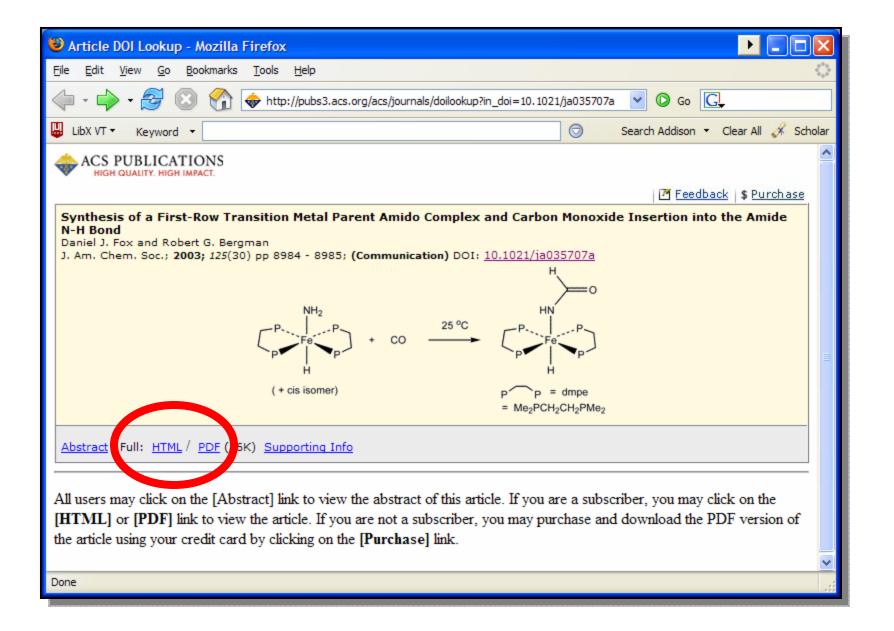

OpenURL Access via Scholar

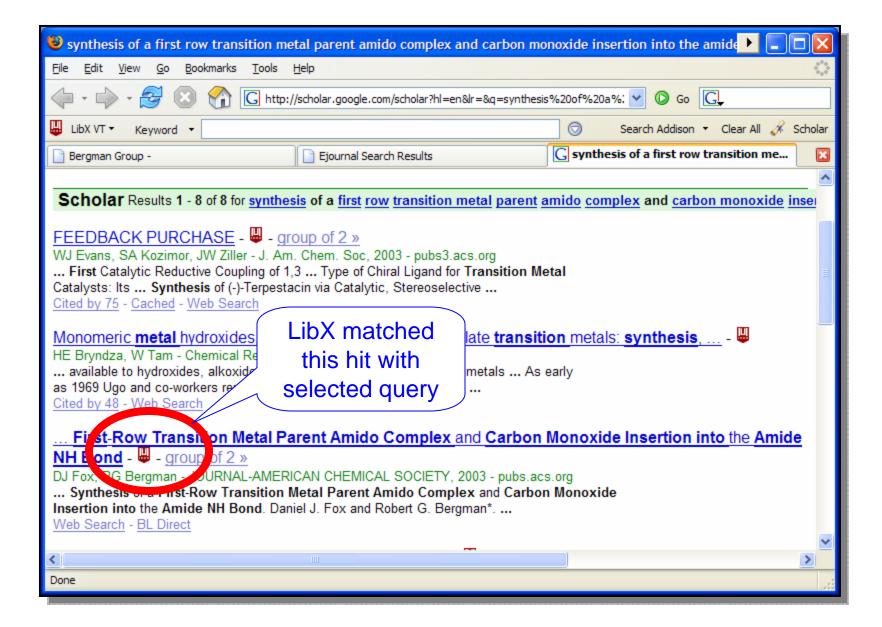

Source: http://www.cchem.berkeley.edu/rgbgrp/recentpub.html

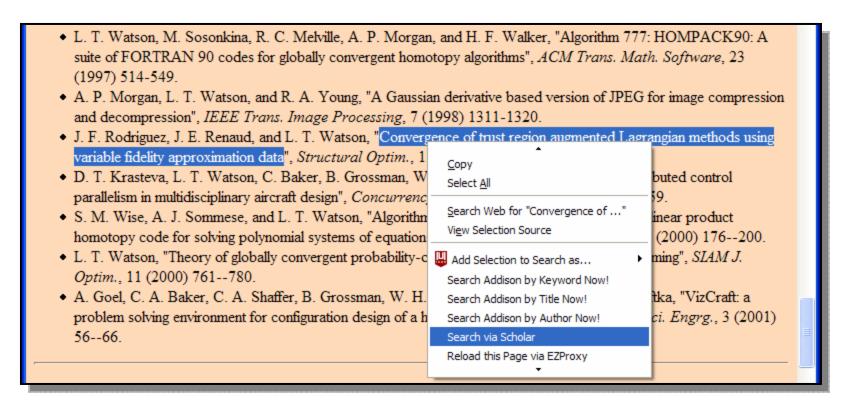

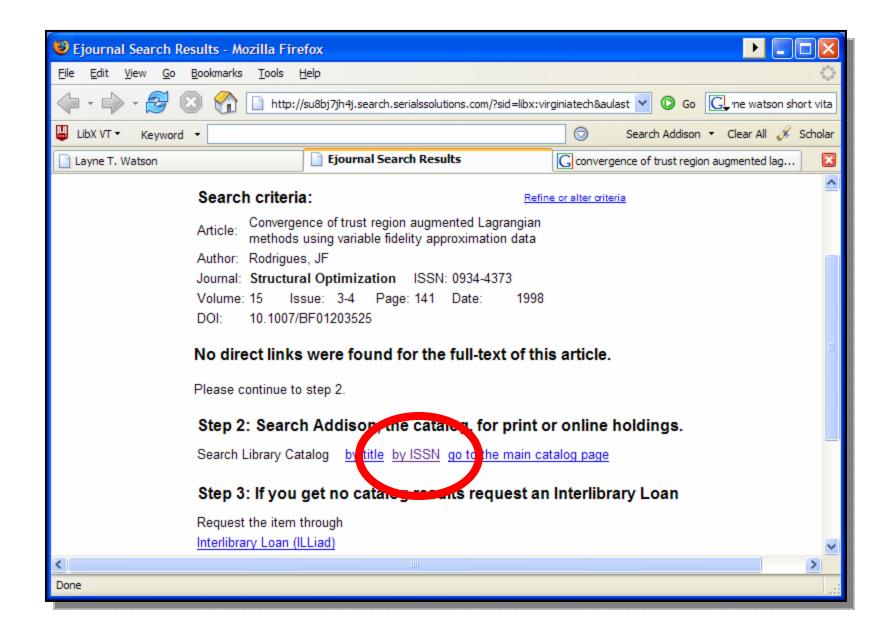

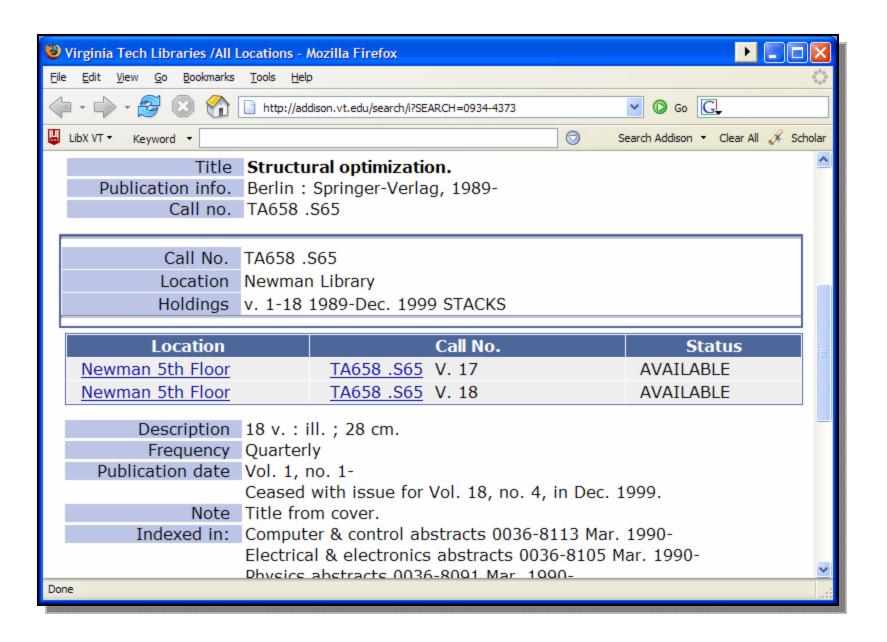

OpenURL Access via Scholar (2)

OpenURL can lead user to print resources if no electronic copy is available

Source: http://people.cs.vt.edu/~ltw/shortvita.html

Localization via LibX

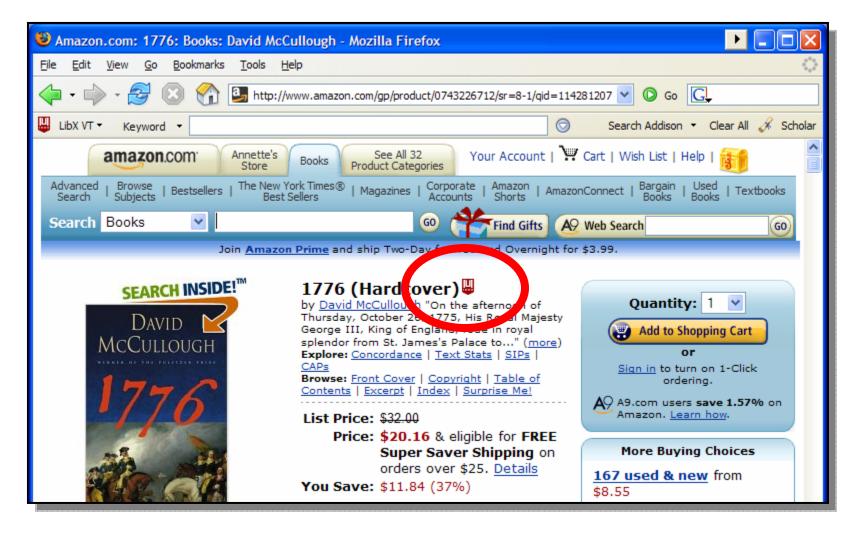

- LibX enriches web pages before they are displayed to the user
- Inserts hyperlinked "cues" that point at local library resources
 - E.g., amazon.com page points at library record of same book
- Implemented for: google.com, yahoo.com, bn.com, NY Times, Books in Print, ...
- Includes support for COinS (ocoins.info)

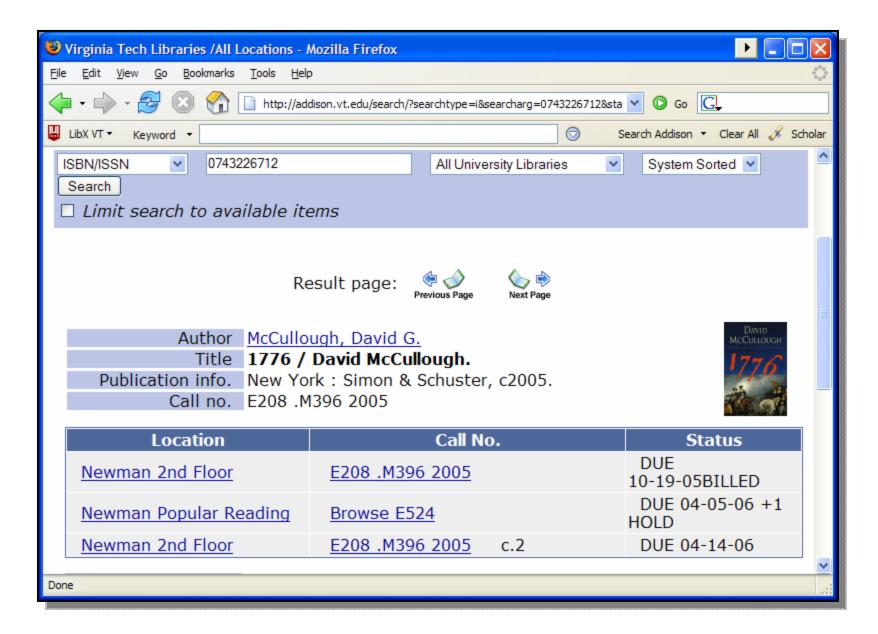

Demonstration 3

Localization using Cues

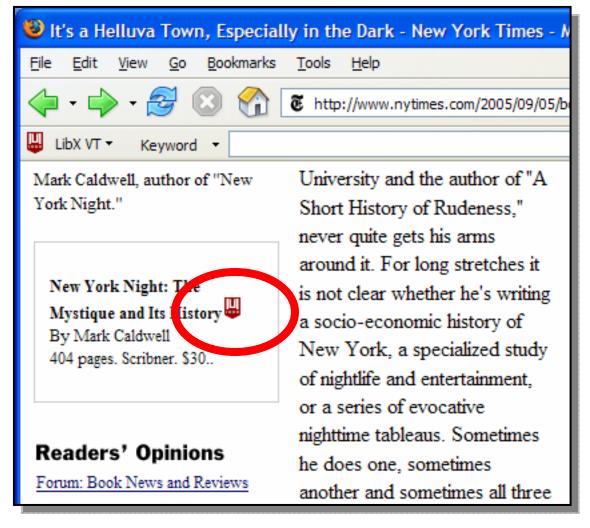

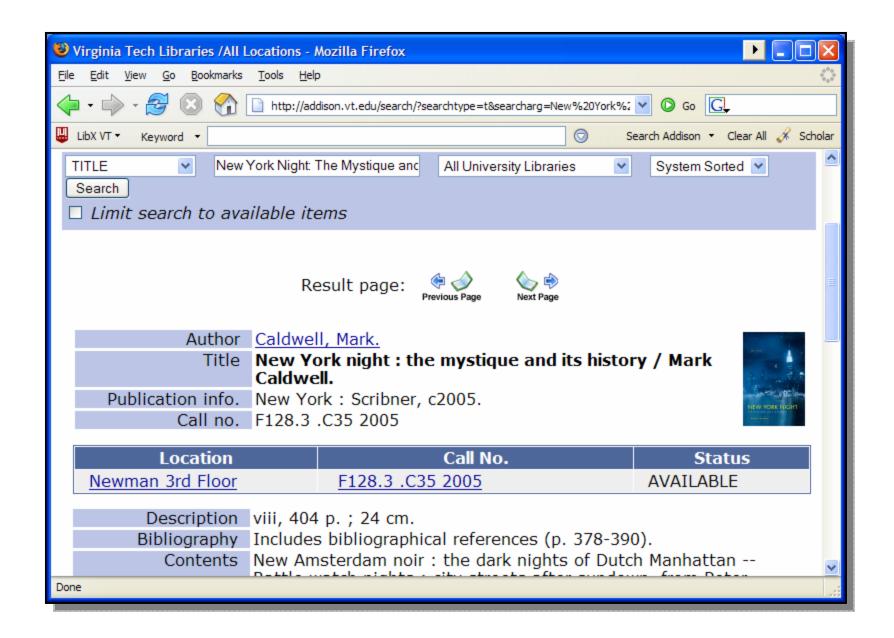

Cues on Amazon

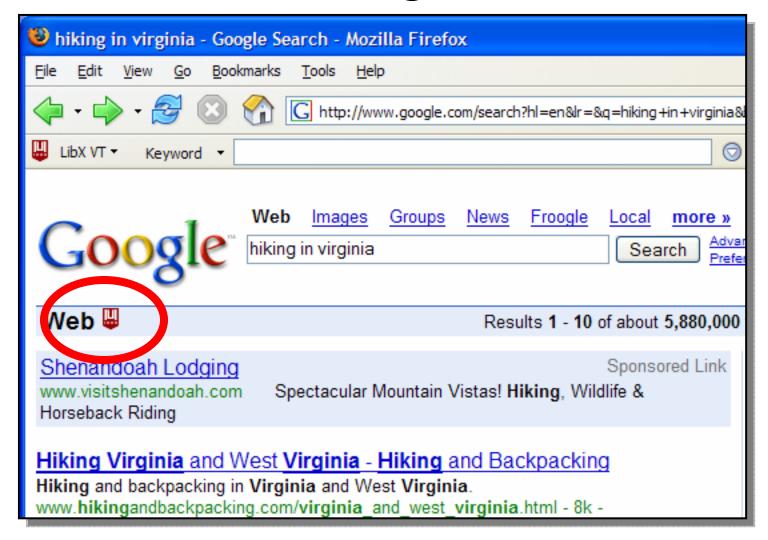

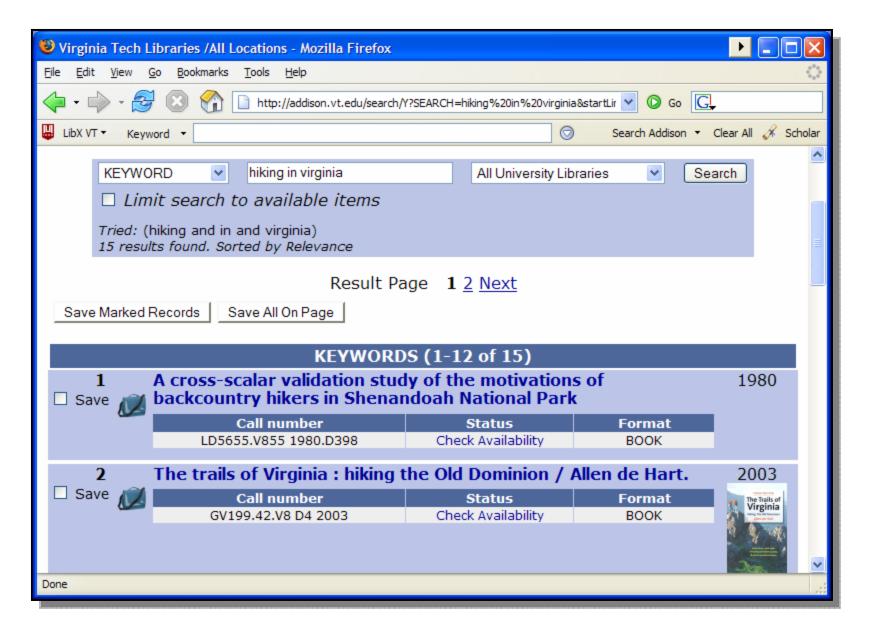

New York Times Book Review

Google

Try LibX!

- LibX is available for your library!
- It's nifty
- It's free
- It's Open Source
- Go to http://libx.org for more information

Currently Deployed Editions

Future Work

- Edition builder interface
 - Currently building an extension requires creating a config file which must be uploaded and checked
 - Goal: develop a wizard-type web interface where libraries can build a LibX edition interactively
- Create a LibX plug-in for Internet Explorer

Questions?

Thank you from the LibX Team

Additional Material

LibX & Privacy

- Key goal: protecting LibX users' privacy
- Users do not reveal more information than they would if they used the library catalog
 - Exception: Referrer URL
- Tenet: Do not run queries unless user explicitly clicks on a link
 - E.g., no automatic holdings checking if user visits amazon
- Trade-off Privacy/Convenience

LibX & Security

- Firefox extensions are trusted
- Users must trust that extension is not malicious
- LibX does not support user-provided scripts
 - More secure than Greasemonkey
- Source code is available for anybody to inspect
- Future: sign extensions
