

## LibX – Connecting Users and Libraries

Annette Bailey

LITA National Forum

October 2007

## The Age of the Web

- Data from OCLC 2005 Study on “College Students’ Perceptions of Libraries and Information Resources”
- 89% of college students start information search with a search engine
  - vs 2% start with the library website

2

## Perceptions of Libraries vs Search Engines

- Libraries lead in
  - Trustworthiness & Credibility 77% to 23%
  - Accuracy 76% to 24%
- Search Engines lead in
  - Speed 90% to 10%
  - Convenience 84% to 16%
  - Ease Of Use 87% to 13%
  - Cost Effectiveness 71% to 29%
  - Reliability 63% to 37%

3

## Our Challenge

- How can librarians provide users with resources that are
  - Accurate
  - Trustworthy
  - Complete
  - Accessible
- while providing the ease of use, integration, and availability of modern search engines?

4

## Idea: a “library tool” for the Web

- Developed in summer of 2005
- A “virtual librarian” that guides users to library resources while they use the Web
- Library Tool
  - integrates access to library resources into the users’ “webflow”
  - no matter which page a user visits

5

## Where should the library tool be implemented?

Client vs. Server Side Solutions

6

## Server Side Solution

- The “library tool” would:
  - Require buy-in of content providers to serve it
  - Need server infrastructure to retrieve tool configuration based on user’s affiliation
  - Be limited by what can be done in HTML/mashup
    - E.g., can’t enhance browser
- Example:
  - Google Scholar + OpenURL Server

7

 VirginiaTech  
 Invent the Future

## Client Side Solution

- The “library tool” would not:
  - Require buy-in of content providers
  - Need server infrastructure (or very minimal)
- The “library tool” could:
  - Take advantage of a richer user interface
  - Customized and enabled/disabled by the user

8

 VirginiaTech  
 Invent the Future

## The LibX Plugin

- Client-side library tool
- Uses browser extension technology
  - Integrates into the browser’s rich user interface
  - Can provide services on all web pages
  - Does not require server support to operate

9

 VirginiaTech  
 Invent the Future

## Firefox vs Internet Explorer

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>• LibX Firefox               <ul style="list-style-type: none"> <li>– (2005)</li> </ul> </li> <li>• Written in XUL + JavaScript</li> <li>• Uses Firefox extension architecture (overlays)</li> <li>• Easy implementation</li> <li>• Open source environment</li> <li>• Sufficient documentation</li> <li>• Written by Annette Bailey, Godmar Back, and Mike Doyle</li> </ul> | <ul style="list-style-type: none"> <li>• LibX IE               <ul style="list-style-type: none"> <li>– (beta release 2007)</li> </ul> </li> <li>• Written in C#/.Net and JavaScript</li> <li>• Uses .Net/COM Interop</li> <li>• Highly complex to implement</li> <li>• Closed source environment</li> <li>• Poor documentation &amp; limited support</li> <li>• Written by Nathan Baker (MS thesis)</li> <li>• Funded by IMLS National Leadership Grant</li> </ul> |
|---|---|

10

 VirginiaTech  
 Invent the Future

## What LibX Can Provide

- Direct Access to Catalog(s) and Databases
  - Integrated toolbar
  - Smart context menu
- Direct access to OpenURL resolver(s) to find appropriate copy
  - Directly via toolbar or indirectly through Google Scholar
- Remote Access Proxy
- Web Localization
  - Research companion that “hints” at library resources by placing cues into page
  - Autolinking
  - Support for COinS

11

 VirginiaTech  
 Invent the Future

## Library resources are local

- Libraries provide different services
  - Local resources: catalog types, OpenURL resolver, e-Journals lists, local databases, subject pages/guides, consortia catalogs, licensed citation software
  - Many custom settings (“search scopes,” local indices, local ERM) that reflect local circumstances

12

 VirginiaTech  
 Invent the Future

## LibX Editions

- Editions are versions of LibX that are customized for a particular user community
  - Associated with an academic or public library, consortia, or city
- Can be offered by libraries
- Include local settings, including branding

13

 VirginiaTech  
Invent the Future

## Creating LibX Editions

- There is no central database of *all* resources
- There is limited auto-discovery of resources
  - Worldcat registry helps, but by itself cannot automate the process
  - Fully automatic resource discovery ("zero-config") still a vision at this point
- Manual customization is required
- Librarians are best able to provide this customization for their community
- Offer an interface that enables libraries to create LibX editions that incorporate their resources

14

 VirginiaTech  
Invent the Future

## LibX Edition Builder

- Web application that allows the creation and maintenance of LibX editions
- Released in July 2007
- Designed and built by
  - Tilottama Gaat, Master's thesis work
  - Dr. Godmar Back
- Uses Java-based environment
  - ZK ([www.zkoss.org](http://www.zkoss.org)): AJAX via Java servlets
  - Allows building of Rich Internet Applications (RIA)
  - Runs on server side, but look and feel is comparable to desktop applications
- Funded by IMLS National Leadership Grant

16

 VirginiaTech  
Invent the Future

## Open Source Spirit & the LibX Edition Builder

- Anybody can
  - Build an edition
  - Share an edition
  - Copy an edition
  - Modify their copy of an edition
  - Distribute their edition
- Allows personalized vs. blessed editions
  - Individual vs. library editions

17

## Auto Detection Features

- LibX Edition Builder attempts to help user with their configuration
- Contacts OCLC Registries
  - OpenURL Resolver Registry (by IP address)
  - Worldcat Registry (by OCLC institution ID)
- Contacts catalog servers directly
  - Heuristic guesses for server fingerprints, e.g., III returns Server: III 100 in its response
- Keeps and consults own database of catalogs already configured
- Next slide shows how these features work together

23

## User Customization

- Auto detection facilities provide only initial import
  - Edition maintainer can subsequently customize several parameters per catalog type
  - Including name to be displayed, local settings
- Edition builder provides help: ?
  - Commonly used settings, pitfalls, etc.

VirginiaTech  
Invent the Future

## Custom Catalog Support Via URL Templates ("Bookmarklets")

**WorldCat**

☒ Show Required Attributes ☐ Show Xisbn Settings

**Bookmarklet URL Template**

The URL template for this bookmarklet. Each occurrence of %option in the template is replaced with the value the user entered for %option. Possible choices for %option include all built-in search options (such as %Y for Keyword searches) and user-defined search options.

**Example.** To include google.com searches, use the URL template:  
 http://www.google.com/search?q=%Y

List Y under options.

Bookmarklets are similar to [Smart Keywords](#). In fact, you can convert any smart keyword by copying the keyword's location (obtained from Bookmarks -> Organize Bookmarks -> Properties -> Location) here, then replace the %s in the URL with a search option such as %Y.

We will automate the creation of bookmarklets in the future.

## LibX Revision Management

- When configuration changes (new catalog system, new catalog URL, etc.) LibX provides a way to *update* an edition
  - Firefox version uses Firefox's built-in update mechanism
  - IE uses our own implementation
- Each edition may have multiple revisions: 1, 2, 3, .....
- Edition maintainer must manage revisions of an edition to make sure users obtain desired configuration updates
- Provides 2 staging areas before pushing update
  - Test page where testing can be done without downloading
  - Test revision which is complete build that can be installed
- Process shown on next slide

28

VirginiaTech  
Invent the Future

## Revision Management In LibX

## Future Work

- Improve Edition Builder:
  - Auto-detection of bookmarklets (allowing any resource with a search form to be included)
  - Better discovery via OCLC as its services improve
- Improved Web Localization
  - Support pre-search via pazpar2/Z39.50
  - User-provided cues
- User studies of the Edition Builder interface

## Known-Item Retrieval Efficiency

- On average, LibX retrieved the correct item in 81% of cases for 400 randomly selected references
- For details, see Retrieving Known Items with LibX. *The Serials Librarian*, 53(4), 2007.

Recall and Precision for Single-click Known-Item Retrieval via LibX
